A/C DRAIN SUCKER[®]

Clears Condensate
Drain Clogs Fast with
Suction or Pressure

61308
CADS1

Using the Drain Sucker to Suction or Blow Out Clogged A/C Condensate Drain Lines

INSTRUCTIONS:

To Suction a Clogged Condensate Drain:

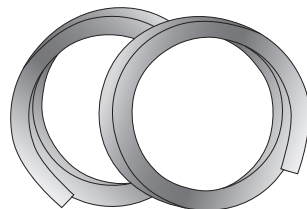

- Using the special black connector fittings, connect the two gray hoses to the top (suction) and bottom (discharge) fittings on the drain sucker pump body making sure to push the gray hose snugly into the pump fitting and then slide the black connector fitting tightly over the hose and pump fitting.
- Connect the barbed plastic fitting on the $\frac{3}{4}$ " PVC Coupling to the other end of the gray hose that is connected to the top (suction) fitting of the pump body.
- Slip the $\frac{3}{4}$ " PVC Coupling over the $\frac{3}{4}$ " PVC condensate drain outlet where it terminates.
- Set the outlet of the discharge (bottom) hose where it can safely discharge water.
- Begin pumping to remove slime clog and condensate water.

To Blow-Out a Clogged Condensate Drain:

- Connect hoses to pump body as described above.
- Connect the outlet of the gray hose from the pump bottom (discharge) to the plastic barbed fitting on the black rubber cone fitting.
- Push the black rubber cone fitting snugly into the $\frac{3}{4}$ " PVC condensate drain outlet where it terminates.
- Begin pumping to build pressure and break up slime clog.
- This procedure can also be done from the condensate drain pan at the A/C unit.

Cleaning and Treating A/C Condensate Drain Pans:

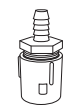

Once drain clogs are cleared, use the PurCool Green Pan Tablet per the package instructions for long term prevention of drain clogs and overflows. The Pan Tablet will not float and will provide up to 4-6 months of time release treatment.
